

PAPER FORMATTING GUIDELINES

To ensure a clear, well-structured, and professional final paper, standard formatting rules must be followed. These guidelines help organize the content in line with academic requirements and make the thesis easier to read and evaluate. Proper formatting also reflects precision and responsibility in academic work.

- The thesis must be written in an impersonal style (the use of first-person pronouns is not permitted) and composed in the language of study.
- The main body text shall use the *Times New Roman* font, size 12 pt., with 1.5-line spacing, justified alignment, and black font colour. Page margins shall be as follows (without borders or additional inscriptions): Right – 10 mm; Top – 20 mm; Left and Bottom – 20 mm (see figure 13).
- Chapters and subchapters shall be numbered using *Arabic numerals*, except for the *Introduction* and *Conclusions*, which are not numbered and should not include the word *Chapter*. For example: 1, 2, 3; or 1.1, 1.2, 1.3; or 1.1.1, 1.1.2 (up to three levels are accepted).
- Source code must be written in *Courier New*, size 10 pt., with single line spacing. If the code exceeds 50% of a page, it should be included as an appendix, with a reference made to it in the main text.
- Abbreviations and terms that are not part of the language of instruction (e.g., English terminology) but are used in the thesis must be included in the *List of abbreviations*, placed before the Introduction and listed in the *Table of contents*.
- Each chapter title must begin on a new page, written in uppercase, using *Times New Roman*, Bold, 13 pt., Centered.
- Subchapter titles must be formatted with *Times New Roman*, Bold, 12 pt., left-aligned, indented by 1.25 cm.
- Chapter and subchapter titles should not appear at the bottom of a page.
- Within paragraphs, the text should be aligned justified, between the left and right margins.
- The first line of each paragraph should be indented by 1.25 cm.
- The spacing between a chapter title and the subsequent text should not exceed one-line interval.
- A subchapter (1.1 or 1.1.1), must be a minimum of one full page in length.
- Page numbering must be placed at the bottom centre of the page. The title page is excluded from pagination. All preliminary pages are counted in the total page count; however, page numbers are not displayed. Pagination begins on the Introduction page.
- It is recommended that the theoretical component of the thesis does not exceed 40% of the total page count.
- The thesis must be printed on A4 paper, single-sided (front side only) for bachelor's theses.
- The thesis must be spiral-bound, in one physical copy for the bachelor's thesis.
- The thesis should use clear and simple language. Information must be presented in a direct, intelligible, and logically structured manner.
- The work must fully reflect the author's original contribution.
- All bibliographic sources must be cited both in-text and listed in the bibliography section.

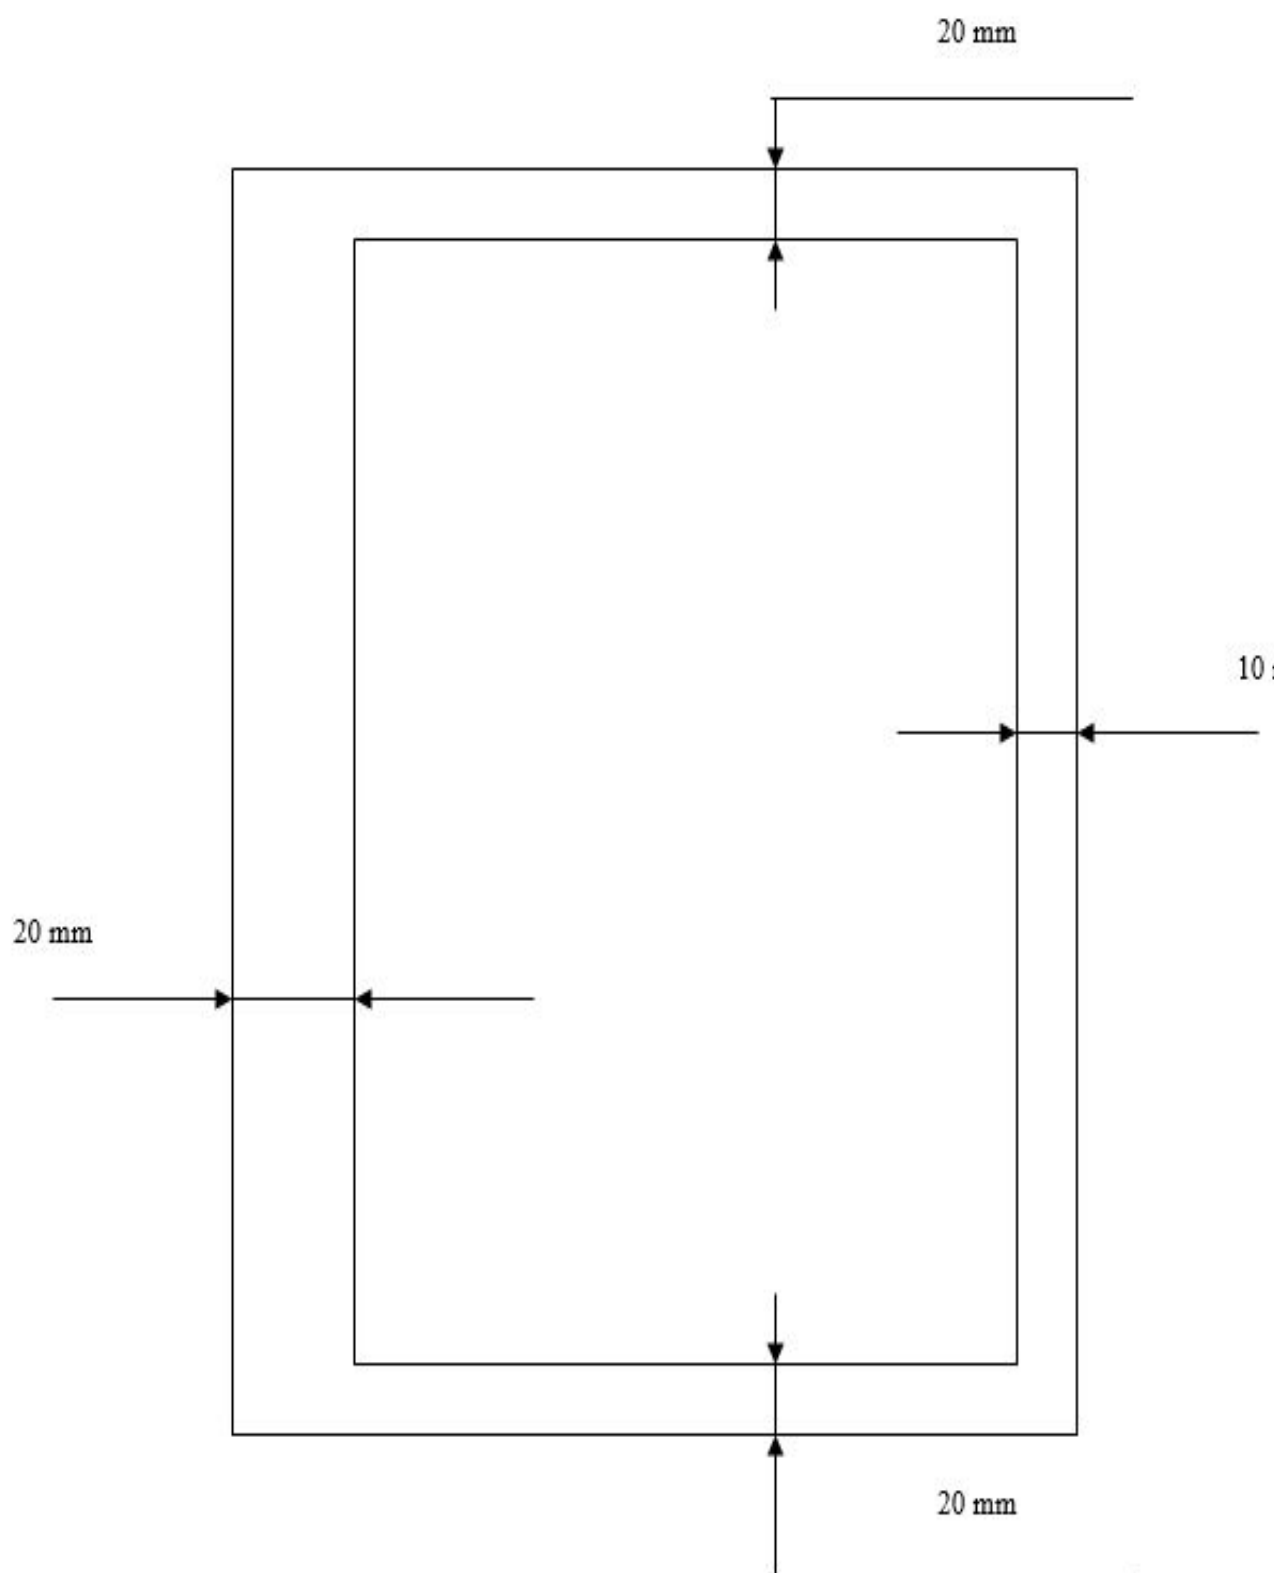

Figure 13. Page margins

Enumeration in context

If the text includes simple lists, they are marked with dashes. Each item begins with a lowercase letter, and each line ends with a semicolon; a period is placed after the final item.

Example:

- one;
- two;
- three.

If the list is referenced in the text, enumeration is done using lowercase Latin letters followed by a closing parenthesis.

If multiple levels of enumeration are needed, lowercase *Latin letters* followed by a closing parenthesis are used for the first level, and *Arabic numerals* with a closing parenthesis are used for the secondary level.

Example:

- a) _____;
- b) _____;
- 1) _____;
- _____;
- _____;
- 2) _____;
- c) _____.

Use of any other symbols is prohibited.

Each item in a list must not exceed one sentence in length.

Figures

Figures must be numbered sequentially within each chapter: the first digit indicates the chapter number, and the second digit represents the order of the figure within that chapter, formatted as “Figure 1.1”.

Both the word “Figure 1.1” and its title should be centered on the page, written in bold, without a period at the end.

If a figure takes more than 75% of the page’s space, it must be included in an appendix, with a reference made to it in the main text.

Figures may be formatted in landscape orientation if necessary, provided they are listed in the Appendix and referenced in the main body of the thesis.

Every figure should be cited within the text and placed immediately following its first reference.

Example:

According to Figure 1.1...

Figure 1.1 – Figure title

Figures are numbered sequentially regardless of subchapters. Figure titles must not be positioned at the bottom of the page.

Tables

Tables are numbered consecutively within each chapter, where the first number represents the chapter and the second number indicates the table's sequence in that chapter, for example, "Table 1.1."

Table titles are positioned above the tables and aligned to the right. The content within the tables is formatted using an 11pt font size with single line spacing.

Tables may be presented in landscape orientation if necessary, provided they are included in the Appendix and referenced accordingly in the text.

If a table takes up more than 75% of a page, it should be placed in an appendix, with a corresponding reference made in the main text.

Every table must be cited in the text, and the table itself should appear immediately following its first citation.

Example:

As shown in Table 1.1, it is recommended that...

Table 1.1 – Table title

A	B	C	D
123	125	255411	553321
123569	2548	123355	1233

Table continuation

When a table continues on the next page, the title should be placed on the right side, followed by the phrase "Continuation of table 1.1", also aligned to the right.

Example:

Continuation of table 1.1

A	B	C	D
1235555	12588	25541188	55332188
1235696778	25488	12335588	123388

When a table extends over two or more pages, the column headers must be repeated at the top of each page.

Table titles should not appear at the bottom of the page.

Formulas

Formulas must be numbered using *Arabic numerals* in ascending order within each chapter.

The first digit indicates the chapter number, while the second represents the formula's sequence within that chapter (e.g., (1.1), (1.2), etc.). Formulas should be centered on the page, with the numbering placed at the right margin of the line.

All symbols and coefficients used in a formula must be explained directly below it, in the same order as they appear in the expression.

Each formula must be referenced in the main text, and it should be inserted immediately after its first citation.

Example:

According to formula (1.1), the following calculation is performed...

$$Ax+B=C \quad (1.1)$$

Appendices

All appendices must be referenced within the main body of the thesis or project and listed in sequential order (e.g., Appendix A, Appendix B, etc.). Each appendix should start on a new page and include a title centred below the heading "Appendix."

Figures, tables, and formulas included in the appendices should be numbered using the corresponding appendix letter, for example: Figure A1, Table B1, Formula C1.

If an appendix contains only one figure or table, its title may serve as the title of the appendix itself.

Example:

Appendix A
Title of the Appendix

Table A.1-Table title

Figure A.1- Figure title

References

The list of references must follow the order in which the sources are first cited in the text. Each citation is marked using square brackets: for example, [1], and corresponds to a full entry in the reference list. This citation style allows the reader to easily identify the original source of a quoted idea or statement.

Numbers assigned to sources remain consistent throughout the document. If only a specific section or page is referenced, the page number should be included in the citation, e.g., [8, p. 231].

The bibliography in the thesis must be compiled using the Zotero application (<https://www.zotero.org/>), following the IEEE citation style.
